## Experimental Probability

## Quick Review

> Saul spun the pointer on this spinner 10 times.
The theoretical probability of landing on the letter A is $\frac{5}{10}$, or $\frac{1}{2}$. Here are Saul's results.

| Letter | A | B | C | D |
| :--- | :---: | :---: | :---: | :---: |
| Number of Times | 6 | 1 | 2 | 1 |

The experimental probability is the likelihood that something occurs based on the results of an experiment.

Experimental probability $=\frac{\text { Number of times an outcome occurs }}{\text { Number of times the experiment is conducted }}$
The experimental probability of landing on the letter A is $\frac{6}{10}$, or $\frac{3}{5}$. This is different from the theoretical probability.
> Saul combined the results from 10 experiments.

| Letter | A | B | C | D |
| :--- | :---: | :---: | :---: | :---: |
| Number of Times | 51 | 19 | 8 | 22 |

The experimental probability of landing on the letter $A$ is $\frac{51}{100}$.
The experimental probability is close to the theoretical probability.
The more trials we conduct, the closer the experimental probability may come to the theoretical probability.

## Try These

1. Look at the table of Saul's individual results. What is the experimental probability of landing on:
i) B ? $\qquad$ ii) C? $\qquad$ iii) $D$ ? $\qquad$ iv) B or C ? $\qquad$ v) A or D ? $\qquad$
2. Look at the table of Saul's combined results. What is the experimental probability of landing on:
i) B ? $\qquad$ ii) C? $\qquad$ iii) D ? $\qquad$ iv) B or D? $\qquad$

## Practice

1. Tatiana spins the pointer on this spinner several times.
Here are her results.

| A | B | C |
| :---: | :---: | :---: |
| \#\#+ \#+ \|| | \#\#+ + + + + + | + + \||| |

a) How many times did Tatiana spin the pointer? $\qquad$
b) What fraction of the spins were A? $\qquad$ B? $\qquad$ C? $\qquad$
2. A coin is tossed 100 times.

Heads showed 43 times and tails showed 57 times.
a) What are the possible outcomes? $\qquad$
b) What is the experimental probability of the tosses showing:
i) heads? $\qquad$ ii) tails? $\qquad$
c) What is the theoretical probability of the tosses showing:
i) heads? $\qquad$ ii) tails? $\qquad$

## Stretch Your Thinking

a) What is the theoretical probability of the pointer landing on:
i) $A$ ? $\qquad$ ii) B? $\qquad$
b) Use an opened paper clip as a pointer. Spin it 100 times. Record the results.

| A | B |
| :---: | :---: |
|  |  |
|  |  |

c) What is the experimental probability of the pointer landing on:
i) $A$ ?
ii) B? $\qquad$
